

GNU Radio Conference 2017

Call For Technical Papers

Bahia Resort Hotel, San Diego, CA

September 11-15, 2017

Information for Authors

Technical Proceedings

The GNU Radio Project is pleased to announce its second annual technical proceedings to accompany the GNU Radio Conference 2017.

We are excited to offer a venue for publication of technical contributions in the area of applied software radio, cognitive radio, and machine learning for signal processing technology at the intersection of Academic, Commercial, Government, and Free Open Source Software.

Open Source, Open Access Radio Research

We are strong believers in open access research and strongly encourage you to co-submit your paper to arxiv.org and to provide reference implementations and simulations on github.com

Accepted technical papers will be published on <https://pubs.gnuradio.org> and indexed by Google Scholar.

Call for Papers

Unpublished papers focused on open, applied, radio technologies, or tutorials, especially those focusing on GNU Radio are welcomed for submission to the proceedings.

Papers must conform to the author guidelines at <http://gnuradio.org/grcon-2017/submit/> where submission details are provided.

We will follow a single blind review cycle and provide rolling reviews upon submission.

Important Dates

June 1: Deadline for presentation abstracts.

July 1: Deadline for paper drafts.

July 10: Final Day for Acceptance Notification

Aug 15: Camera Ready Papers Due

Early September: Proceedings Publication
